PROFESSIONAL SUMMARY

Mobile Application Developer with 2+ years of professional experience building and shipping cross-platform mobile applications with Flutter and Dart. Delivered three production Android applications published to the Google Play Store, including enterprise apps for role-based workflow management, HR operations, and delivery tracking. Experienced in REST API integration, state management with GetX, Provider, and Riverpod, Firebase services, offline-first local storage, and native Android integration through custom platform-channel plugins. Master of Computer Science graduate seeking Mobile Application Developer and Software Engineer - Mobile roles.

TECHNICAL SKILLS

Languages: Dart, Kotlin, Java, JavaScript, Python, SQL, C++

Mobile Frameworks: Flutter, React Native, Android SDK, Jetpack Compose, Flutter Web, Swift (learning)

State Management: GetX, Provider, Riverpod, setState

Backend & Databases: Firebase (Authentication, Firestore, Cloud Messaging, Crashlytics), Supabase, REST APIs, JSON, MongoDB, SQLite, Hive, SharedPreferences, Microsoft SQL Server Management Studio, Azure Data Studio, Apache Server

Native Integration: Platform Channels, Custom Flutter Plugin Development, Kotlin, Android Native Modules, Bluetooth Peripherals, Barcode and QR Scanning

Tools & Practices: Git, GitHub, GitHub Actions, Android Studio, Visual Studio, Visual Studio Code, Xcode, Postman, Figma, Google Play Console, Agile, Code Review, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Flutter Developer | Viz Digital Marketing LLC

Remote, United States | February 2026 - Present

- Develop an internal Scratch Ticket Management application in Flutter, enabling staff to track ticket inventory, distribution, and redemption through a single cross-platform interface.
- Build accounting and reconciliation reporting features that aggregate scratch ticket transaction data, replacing manual spreadsheet workflows and reducing reporting effort for the accounting team.
- Extend the platform to the browser using Flutter Web, delivering a responsive web client from the shared Dart codebase so the mobile and web products stay in sync from one source of truth.

Junior Flutter Developer | FTNSS

Remote, United States | December 2025 - January 2026

- Built a partner-facing web portal in Flutter to manage gym membership signups, replacing a manual intake process with a structured digital workflow.
- Designed multi-step, validated forms to capture member and gym location details, integrating with backend REST APIs for persistence and retrieval.
- Implemented role-based access control that scopes screens, data, and permitted actions to each user role, keeping partner data isolated across accounts.

Graduate Teaching Assistant | Cleveland State University

Cleveland, OH | January 2025 - December 2025

- Supported instruction across three sections of Data Structures and Algorithms, Introduction to Data Science, and Introduction to Computer Architecture, holding office hours and leading exam review sessions.
- Graded programming assignments, quizzes, and labs, providing written feedback on algorithm design, code correctness, and implementation quality.

Flutter Application Developer | Tech Elecon Pvt. Ltd.

Anand, Gujarat, India | January 2023 - November 2023

- Designed, developed, and published three production Flutter applications to the Google Play Store, owning features end to end from requirements gathering through release, user training, and post-deployment support.
- Built the Kaizen continuous-improvement app from scratch, implementing role-based access for Team Leader, Manager, and Employee roles with two core modules, Kaizen submissions and One Point Lessons, supporting structured data entry and multi-image capture and upload.
- Developed a custom Flutter plugin using Kotlin and platform channels to bridge Honeywell hardware barcode scanner events from the Android layer into Dart, enabling the internal Canteen Management app to process employee badge scans on ruggedized devices.

- Built a Fuel Management application with Bluetooth integration for TSC thermal printers, generating and printing transaction receipts directly from the device at the point of dispensing.
- Delivered HRMS features including an attendance calendar that reconciles API attendance records with holiday schedules, plus leave request and multi-level approval workflows; redesigned the application UI to improve usability and visual consistency.
- Rebuilt Opal ePOD, a delivery and proof-of-delivery tracking application, migrating it from an existing React Native codebase to Flutter and shipping the rewrite to the Google Play Store.
- Integrated all applications with existing enterprise REST APIs using GetX for state management and dependency injection, extending and modifying backend endpoints where mobile requirements demanded changes.
- Collaborated with cross-functional teams to gather requirements, design interfaces, and conduct testing, and led end-user training sessions during rollout.

Mobile Application Developer Intern | Alian Software

Anand, Gujarat, India | June 2022 - July 2022

- Implemented a video optimization feature for a live React Native school learning platform, improving media delivery for students on constrained mobile connections.
- Worked with async storage, REST API data fetching, reusable component design, Firebase push notifications, and Google Play Store deployment.

PUBLISHED APPLICATIONS

Kaizen — Enterprise continuous-improvement and One Point Lesson app with role-based access. Flutter, GetX, REST APIs.

play.google.com/store/apps/details?id=com.techelecon.kaizen

Tech HRMS — Human resources app for attendance calendars, leave requests, and approval workflows. Flutter, GetX, REST APIs.

play.google.com/store/apps/details?id=com.techelecon.tech_hrms

Opal ePOD — Delivery and electronic proof-of-delivery tracking app, rewritten from React Native to Flutter.

play.google.com/store/apps/details?id=com.opalepod.opalepod

PROJECTS

Noise Level Monitoring App | React Native, Android Sensors, Push Notifications

- Built a mobile application that samples ambient audio through the device microphone and triggers push notifications when sound levels exceed a configurable decibel threshold, with continuous background monitoring.

EDUCATION

Master of Computer Science | Cleveland State University | Cleveland, OH

January 2024 - December 2025 | GPA: 3.8 / 4.0

Bachelor of Engineering, Information Technology | Gujarat Technological University | Anand, Gujarat, India

July 2019 - May 2023

CERTIFICATIONS
